

Grant Program

10x Genomics, BRIGHTcore (ULB), and Singh Lab (IRIBHM) are Organising a Grant Program for Innovative Investigators at Université libre de Bruxelles, Brussels 2019

Description:

We are pleased to announce a pilot award to provide library preparation for **Single Cell Gene Expression** or **Single Cell Immune Profiling** solutions. We are offering a unique opportunity to support innovative pilot research projects using 10x Genomics Single Cell Chromium Controller.

The support covers library preparation for up to 4 samples. The program aims to support up to 1 pilot project. Applications will be reviewed within three weeks of submission deadline.

Objective:

The goal of this program is to support researchers at the **ULB** and other researchers from Brussels as they seek to generate pilot data to submit in support of future grant applications, and to promote the utilization of cutting-edge solutions from 10x Genomics for genomic and translational research.

Eligibility:

1. Applicants must hold primary research positions and must be planning to submit a grant application to support a broader research aim for which they need pilot data.
2. Applicants may not hold current awards directly related to the proposed research.
3. Young investigators are strongly encouraged to apply.

Apply:

Please submit your abstract by **15th of February, 2020** to be considered for this program.
